

11/11/2025 - Sprint 2 Standup 1 What did you work on since the last standup?
I changed the functionality of the add_item_view to being only visual and made a connection with the controllers. What do you commit to next? I want to connect the food_item_view page with the controllers too. When do you think you'll be done? I can do it by the end of the week for sure. Do you have any blockers? I just need the models to be done and fully functional so I can test if I connected controllers to the database and is passing information successfully.

11/12/2025 - Sprint2 Standup 2

What did you work on since the last standup?
I finished connecting the food_item_view page so that it is completely connected with the back end

What do you commit to next?

I want to finish connecting the last view page home_view

When do you think you'll be done?

I can finish by the end of the week for sure

Do you have any blockers?

I can't module up the app since I need the log in page done so that I can access the other pages, now that it needs information from the backend, I need to test that

11/13/2025 - Sprint2 Standup 3

What did you work on since the last standup?
I finished connecting the home_view page so that it is completely connected with the back end, now all the pages from Sprint1 are completely connected with the back

What do you commit to next?

I would like to connect the log in page with the back so that the app is back on being functional

When do you think you'll be done?

I can do it as soon as the page is ready

Do you have any blockers?

I cant start working on the connection with the log in page until its done, also, since the log in page would be the new start page, I need it to be done so that we can simulate the app
